# Scheduling Software Program Design and Testing

## Design Documentation

### Class Design

Scheduling software contains six main classes, one of them is the main program class. Of the six classes included, five of them are models that will be used as a base class or by the SQL database class to gather and store data within the scheduling program. The other classes in the scheduling software program are either used as a user interface element or to manipulate the data that is calling to the SQL database class to store the changes that are made. The diagrams included below reflect the reference diagram and all related data points. The program has a total of sixteen classes which are AppointmentClass, CustomerClass, Person, PublicClass, SQLClass, User, Program, AppointmentByCustomer, AppointmentByMonth, AppointmentForm, CustomerForm, LoginForm, Form, Spanish, MainForm, and ReportsForm.

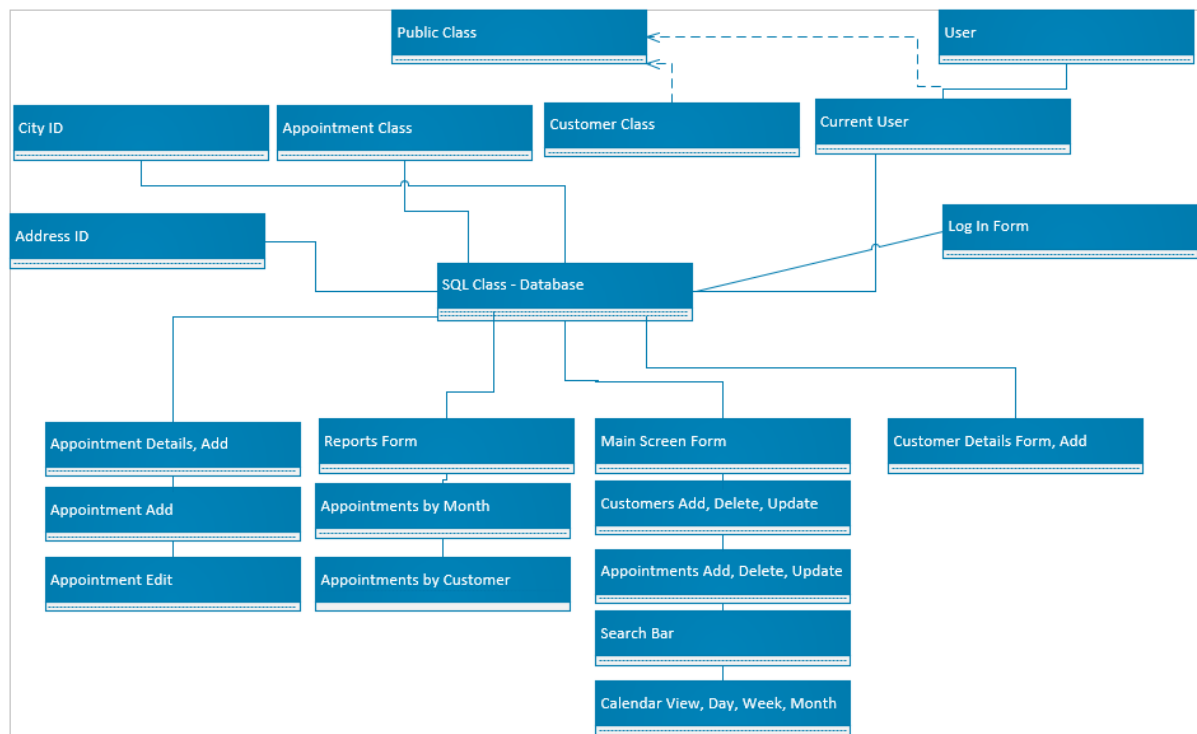

Public class is used as a parent class of CustomerClass, Person and User; these three classes have many differences, but all have properties they share. PublicClass is used throughout the program as a base class that methods are implemented from. It is also used for a new derived class of PublicClass several times in the program as seen in the example below which allows a new user that has been created to be accessed from the database. This also meets the polymorphism requirement in that the derived class inherits from my PublicClass which is the base class giving the derived class all the methods, fields and properties and events that are announced in PublicClass. These connect and share with the base class for possible future reports or requests it can use both for the different Users without additional modification.

## Scheduling Software Program

```
public partial class ReportsForm : Form
{
    private static PublicClass universals = new PublicClass();
    string getUsers = "SELECT userName from user;";
    int userId;
    1 reference
    public ReportsForm()
    {
        InitializeComponent();
        DataTable users = new DataTable();
        universals.GetData(getUsers, users);
        userCB.DataSource = users;
        userCB.DisplayMember = "userName";
    }
}
```

This polymorphic nature will help with creating users and the generated reports on shared properties.

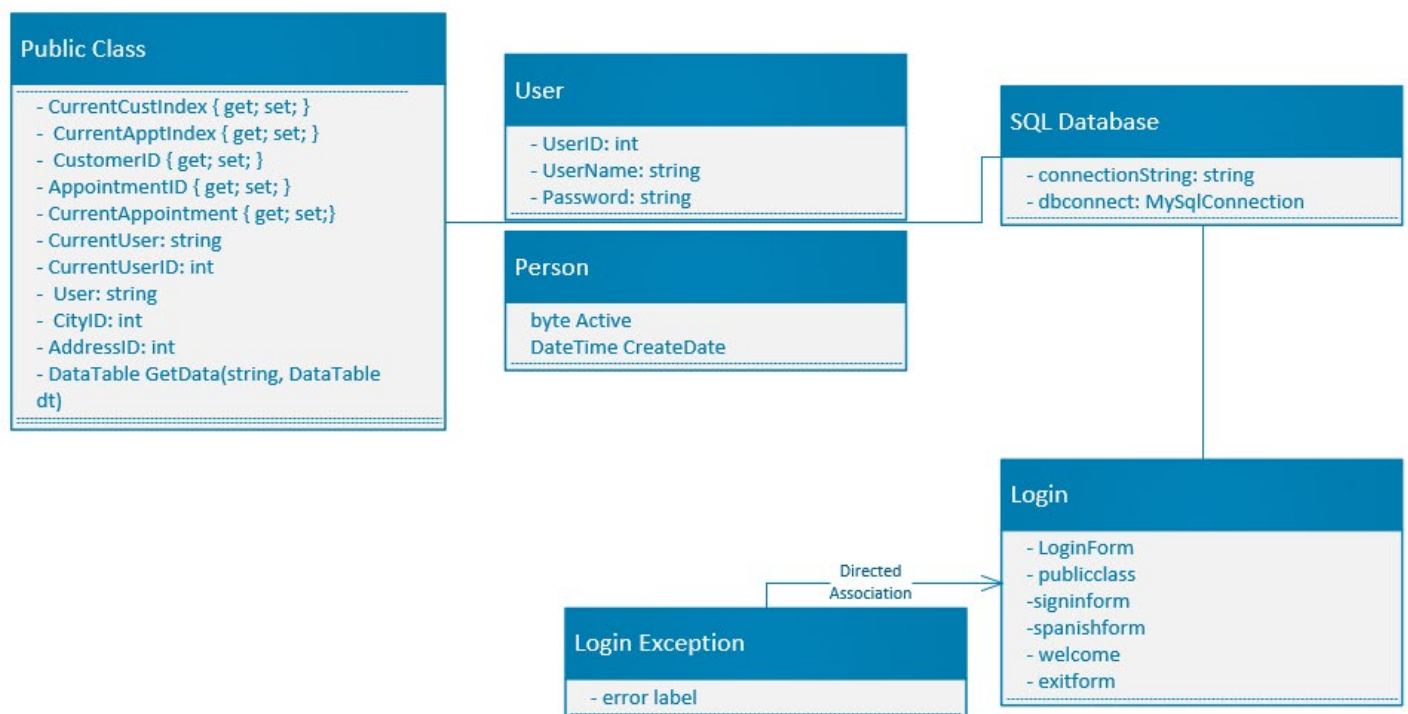

How the user and person class differ is that the user has login information to log into the scheduling software program while the person has the base information and ability to create additional users for future customers that adopt this scheduling software program. The functionality to add new users from the scheduling software program or edit users is not necessary for the scheduling software program right now. This will be handled by their IT staff and that will most likely be their SQL database Administrator. Below is an image of how all classes work together in a UML diagram. Future sections of this diagram will go into more detail and are explained.

## Scheduling Software Program

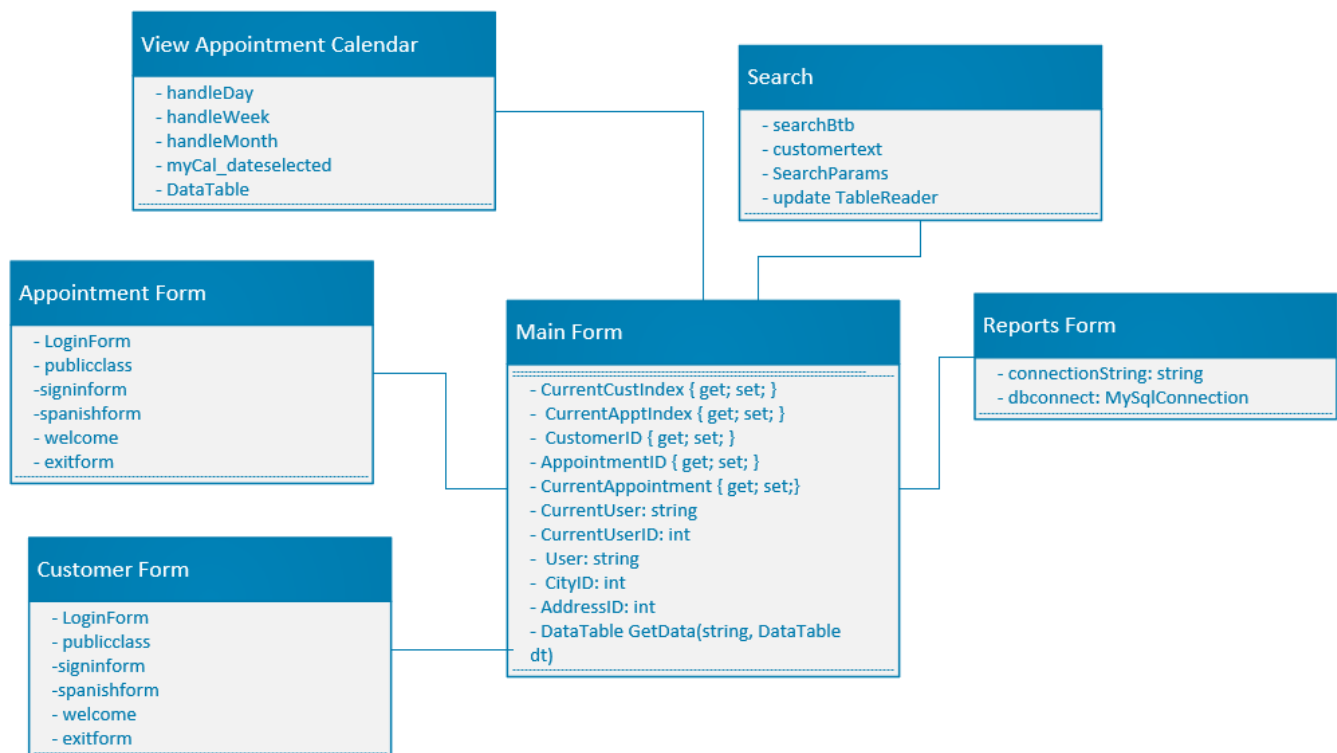

The image above reflects the flow that the scheduling software follows starting from the login which then proceeds to the main screen of the scheduling software program. On the main screen you have the three main user interface elements AppointmentForm, CustomerForm, and the ReportsForm section which includes AppointmentByMonth, AppointmentByCustomer, and AppointmentForm. Each of these will make a request to the SQL database which then will respond with the data that was requested and propagate that data into the modules shown above. This allows the data to then be viewed. The data can be edited and saved, and the data is available by the user interface sections in the application.

The start of the scheduling software program is the login form. From the diagram below you can see from the login form you have user and culture information localization property which allows the program to update the UI into the proper language and have a variable user to ensure that whomever is trying to access should be someone that has accessing to the scheduling program. A separate login expectation class was made to handle expectations of the class which is placed in LoginExpectation.

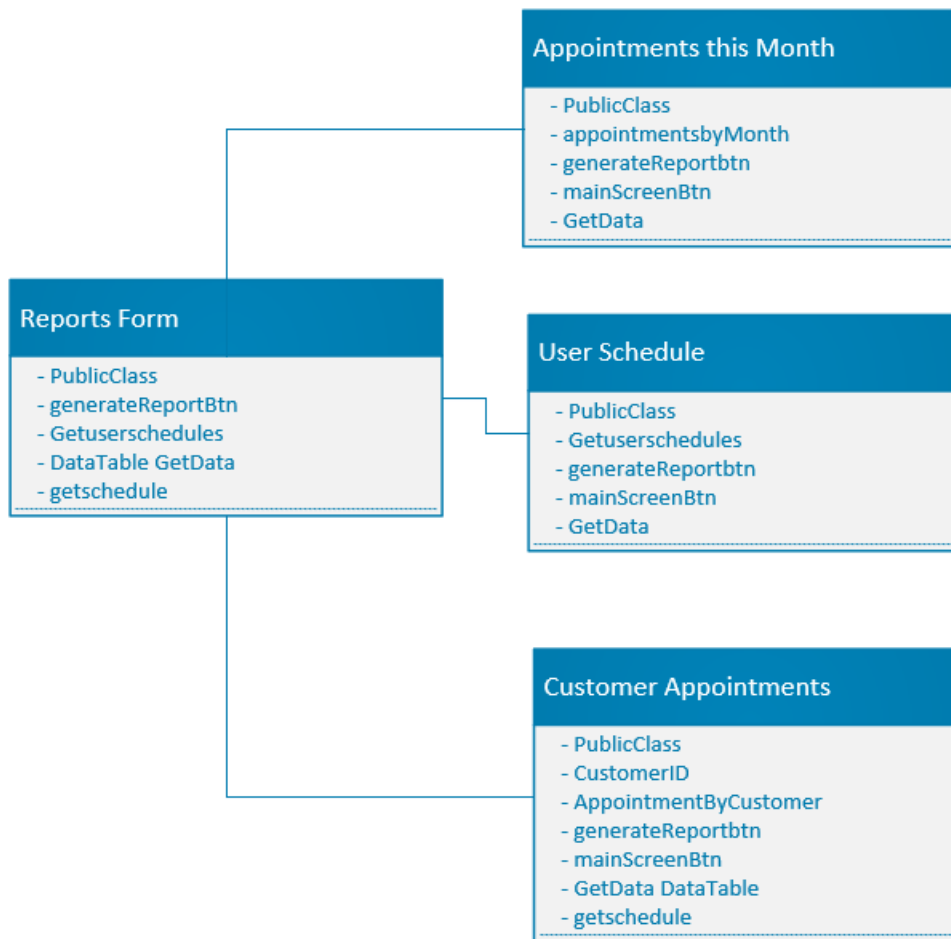

## Scheduling Software Program

Once a user is signed in, they have access to the main form class. This class is the main entry and gives access to the other user interface classes in the diagram. While on the main screen of the scheduling software program you can access the appointments class form, the customer class form, and the reports class form. Using the customer add button, delete button, or edit button. Using the appointments add button, delete button, or edit button, and using the reports button. Which includes reports titled appointments this month, user schedule, or all customer appointments. The user will be able to access the appropriate forms and access the data associated with each form and report. While in these each of these forms you can add, edit and delete customers or appointments. The program also has a search feature that will allow the program user to search by the customer first or last name.

## Scheduling Software Program

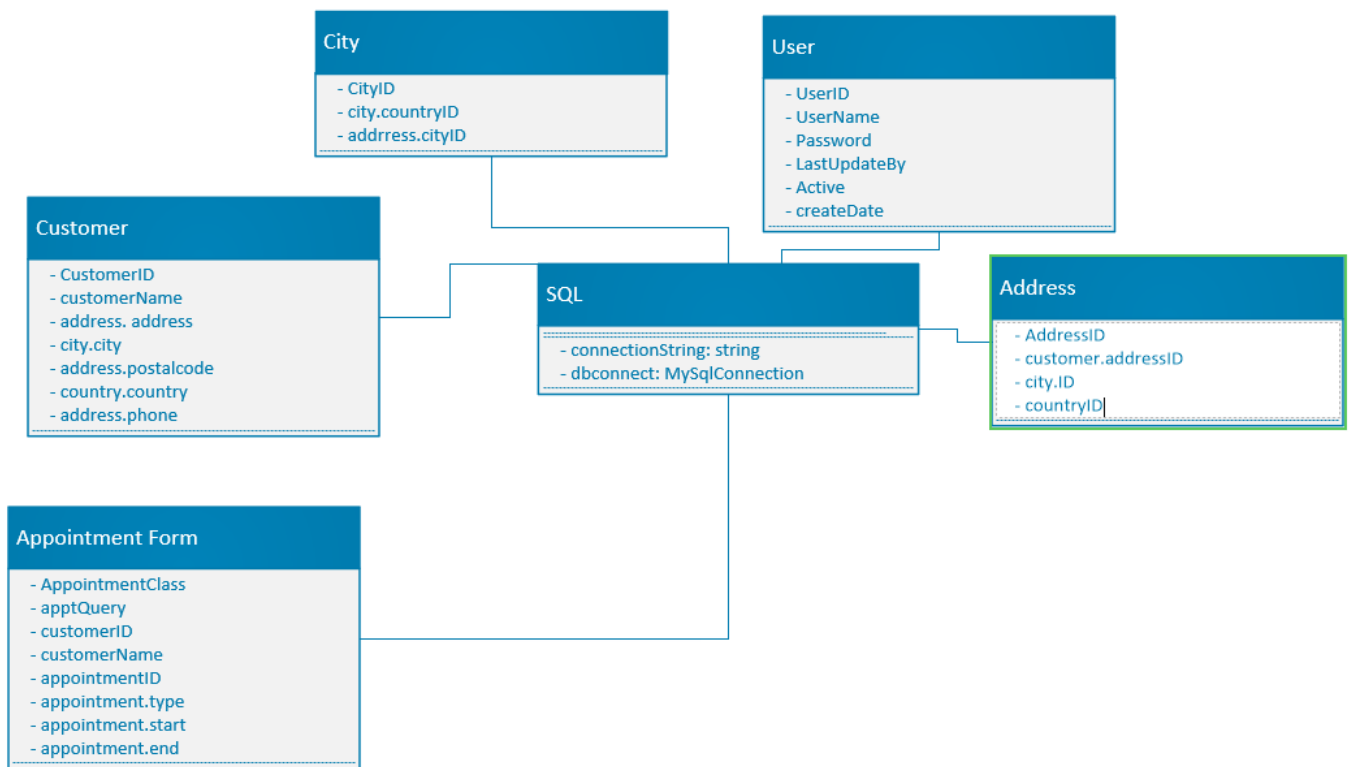

The add appointment button on the main screen will open the appointment form. This form has similar functionality as the customer form but its specific to the appointments that a customer is assigned to. The functionality of adding and editing appointment is part of the AppointmentForm because the main AppointmentForm can search.

All the add, edit, and delete functionality from a form will be sent to the SQL database class and within that the database will then be updated with the new data. Besides being invoked by the main three forms AppointmentClass, CustomerClass, and ReportsForm this is also directly used within the model classes. These models are important in order to keep data that is being place in organized object while also making it easy to update the data in the SQL database from the object.

## Scheduling Software Program

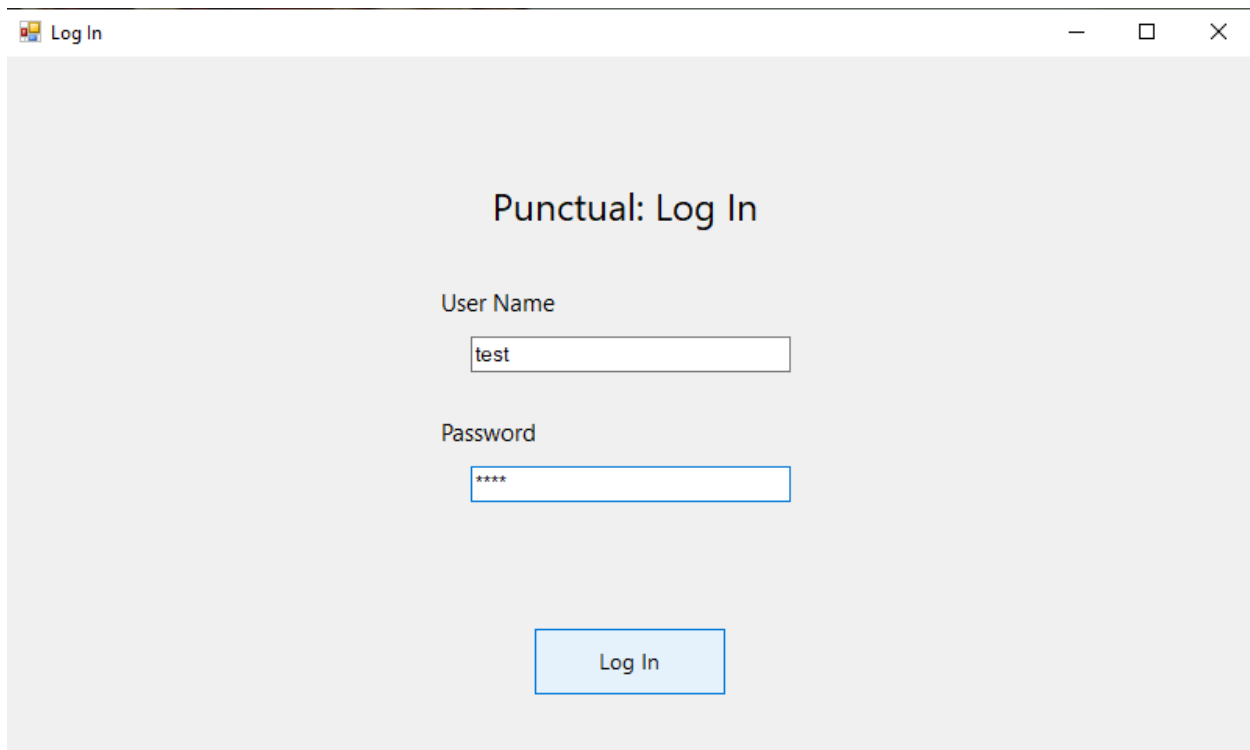

We have two unique model classes called the User and CustomerClass. Both of these classes uniquely inherit from the PublicClass and the abstract class Person. This is set in place because they share many sections of methods of code that can be handled similarly. Both classes can be used in place of a User object polymorphically for the methods and properties they share. This is beneficial because the code can be used with what they have in common with the PublicClass and the Person class by passing in the respected objects therefor no other modification will be needed. The unique properties and methods cannot be used for all of these classes. To explain a customer is a person, and a person is a user but a user is not a customer.

## Scheduling Software Program

### User Interface Design

The screen design has a focus on simplicity because that is one of the most important parts of the user interface development and user experience. All screens were created to make it easier for users to navigate and use the program. They are easy to use and intuitive controls were included to further bring out the usability and features of the scheduling software program. Listed below are high fidelity renders of the UI.

The first user interface screen of the scheduling program is the login form. This screen was designed so a user is self-aware of what needs to happen next. The title asks that a user please log in and has the text box for both the username and password of the user. Once the user has filled in their information the sign in button signifies what the user needs to do next, which is click the login button. Feedback is given directly to the user on the user interface to inform them of invalid credentials.

Log In

Punctual: Log In

User Name

test

Password

\*\*\*\*

Log In

## Scheduling Software Program

The image shows a Windows-style window titled "SignInForm". It has a light purple background. At the top, it says "Please Log In". Below this, there are two input fields: "Username" with the text "test" and "Password" with three asterisks "\*\*\*". To the right of the password field, there is a red error message: "The username or password are incorrect." Below the input fields are two buttons: "Exit" and "Sign In". The "Sign In" button is highlighted with a blue border.

Once logged in the user receives a success message:

## Scheduling Software Program

When a user has successfully logged into the scheduling program, they then land onto the main screen which has options available to navigate to different other forms within the program using the user interface, and it has a button to exit the scheduling program. The top of the form has a search button that can be used to search for a customer by their first or last name, doing so will update the customers list below with the customer that has the name that you searched for. If you do a blank search with no name entered the customer list will revert back showing everyone that is a customer in the program. The customers area of the main form has the complete list of customers within the program along with their address, city, zip code and phone number. You can click to add a customer here, delete a customer or update a customer's information from here. The appointments area of the screen has all the appointments, the appointment id, type of appointment, start date and time and the end date and time of the appointment. You can add appointments from the main form, you can delete appointments, or you can update the information within an appointment. The Reports on the lower left side of the main form has three reports buttons that can be clicked. The appointments this month report, the user schedule report, and the custom appointments form. The top left has a calendar that you can view appointments by day, week, or month if the radial button is clicked for those three options.

The screenshot shows the MainForm window of a scheduling application. The interface includes a search bar at the top right, a calendar on the left, and two main data tables: Customers and Appointments. The Customers table lists three customers: John Doe, Alfred E Newman, and Ina Prufung. The Appointments table lists three appointments: John Doe (Presentation), Alfred E Newman (Contract), and Rebekah Test (Scrum). The interface also features buttons for adding, deleting, and updating records, as well as a section for reports.

**View Appointment By:**

**Customers**

customerName	address	city	postalCode	phone
John Doe	123 Main	New York	11111	555-1212
Alfred E Newman	123 Elm	Toronto	11112	555-1213
Ina Prufung	123 Oak	Oslo	11113	555-1214

**Appointments**

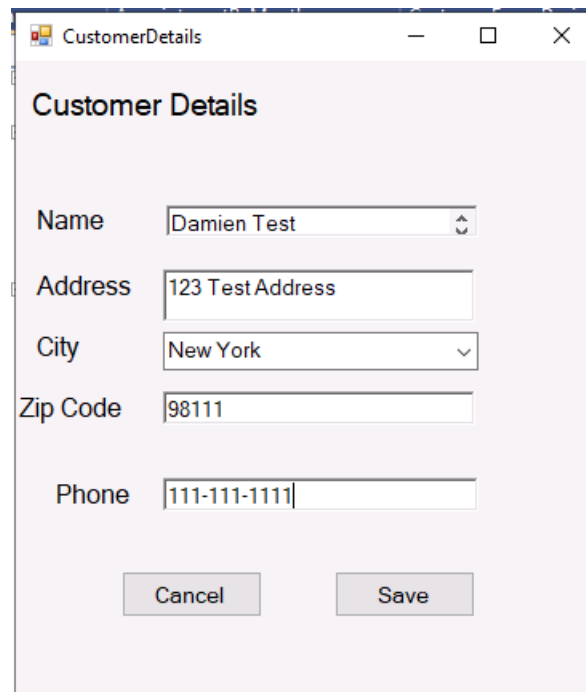

customerName	appointmentId	type	start	end
John Doe	1	Presentation	12/31/2021 5:00...	12/31/2021 5:00...
Alfred E Newman	2	Contract	12/31/2021 5:00...	12/31/2021 5:00...
Rebekah Test	3	Scrum	5/9/2022 8:00 AM	5/9/2022 9:00 A

**Reports:**

- 
-

## Scheduling Software Program

If the user selects the customer add button, they will be brought to the customer details form. It contains blank fields that will need to be filled in to add a customer to the program. The form will not allow you to save it if its incorrectly filled in or blank. You can cancel out of this form or add the customer details and save the form as you can see in the following screen shot.

The screenshot shows a window titled "CustomerDetails" with a light purple background. The window contains the following fields and controls:

- Name:** A text input field containing "Damien Test".
- Address:** A text input field containing "123 Test Address".
- City:** A dropdown menu showing "New York".
- Zip Code:** A text input field containing "98111".
- Phone:** A text input field containing "111-111-1111".
- Buttons:** Two buttons at the bottom, "Cancel" and "Save", both with a light gray background.

From the main form screen if you click to delete a customer you get a pop warning asking if you want to permanently delete the customer record which you can click yes or no too.

## Scheduling Software Program

The screenshot shows the 'MainForm' window of a scheduling software. It features a 'View Appointment By:' section with a calendar for May 2022, where the 22nd is selected. Below the calendar are radio buttons for 'Day', 'Week', and 'Month'. To the right is a 'Customers' table with columns: customerName, address, city, postalCode, and phone. The table lists three customers: John Doe, Alfred E Newman, and Ina Prufung. Below the table are 'Add', 'Delete', and 'Update' buttons. On the left, under 'Reports:', there are three buttons: 'Appointments this Month', 'User Schedule', and 'Customer Appointments'. In the center, there is an 'Appointments' table with columns: customerName, appointmentId, and type. It lists three appointments for Alfred E Newman and Rebekah Test. Below this table are 'Add', 'Delete', 'Update', and 'Exit' buttons. A search bar is located at the top right. A confirmation dialog box is open over the 'Delete' button, asking 'This will permanently delete the customer. Continue?' with 'Yes' and 'No' options.

customerName	address	city	postalCode	phone
John Doe	123 Main	New York	11111	555-1212
Alfred E Newman	123 Elm	Toronto	11112	555-1213
Ina Prufung	123 Oak	Oslo	11113	555-1214

customerName	appointmentId	type
John Doe	1	Presentation
Alfred E Newman	2	Contract
Rebekah Test	3	Scrum

If you click customer update a customer details screen will open up and from that you have the option of updating the customers details and saving it or canceling out of the form.

The screenshot shows the 'CustomerDetails' window. It has a title bar 'CustomerDetails' and a close button. The form contains the following fields: 'Name' (a dropdown menu showing 'Alfred E Newman'), 'Address' (a text box with '123 Elm'), 'City' (a dropdown menu showing 'Toronto'), 'Zip Code' (a text box with '11112'), and 'Phone' (a text box with '555-1213'). At the bottom are 'Cancel' and 'Save' buttons.

Once you either save or cancel from the customers or appointments screen the program will always take you back to the main form screen.

## Scheduling Software Program

The MainForm window displays a calendar for May 2022 on the left, with the 22nd selected. Below the calendar are radio buttons for 'Day', 'Week', and 'Month', and a 'Today: 5/22/2022' label. The top right features a 'View Appointment By:' search bar and a 'Search' button. The 'Customers' table lists three entries: Ina Prufung, Rebekah Test, and Damien Test. The 'Appointments' table lists three entries: John Doe, Alfred E Newman, and Rebekah Test. Both tables have 'Add', 'Delete', and 'Update' buttons below them. The 'Appointments' table also has an 'Exit' button.

customerName	address	city	postalCode	phone
Ina Prufung	123 Oak	Oslo	11113	555-1214
Rebekah Test	123 test main street	Los Angeles	91552	111-111-1111
Damien Test	123 Test Address	New York	98111	111-111-1111

customerName	appointmentId	type	start	end
John Doe	1	Presentation	12/31/2021 5:00...	12/31/2021 5:00...
Alfred E Newman	2	Contract	12/31/2021 5:00...	12/31/2021 5:00...
Rebekah Test	3	Scrum	5/9/2022 8:00 AM	5/9/2022 9:00 A

If you click appointments add, an appointments details screen opens up. From this there is a dropdown that contains all of the customers that have been registered and saved in the database from the customers' form. The names are prefilled in the dropdown and from that you can pick the customer that you would like to create a appointment for.

The AppointmentDetails window shows a form with fields for 'Customer Name', 'Type', 'Start Time', and 'End Time'. A dropdown menu is open, showing a list of customer names: John Doe, Alfred E Newman, Ina Prufung, Rebekah Test, and Damien Test. The 'Start Time' field is prefilled with '2022/02/03 00:00:00'. 'Cancel' and 'Save' buttons are at the bottom.

Appointment Details

Customer Name: John Doe

Type: John Doe

Start Time: 2022/02/03 00:00:00

End Time:

Cancel Save

## Scheduling Software Program

The appointment details form requires that you input an appointment during business hours, or it will not save. The appointment has to be between the hours of 8am to 5pm. If you try to schedule outside of that time frame you get a red warning that requires you to change the time in order to save the appointment details, or you can cancel out of the appointment details screen.

### Appointment Details

Customer Name

Damien Test

Type

Scrum

Start Time

2022/05/09 07:00:00

End Time

2022/05/22 12:00:00

Appointment must be scheduled between 8am and 5pm.

Save

## Scheduling Software Program

To edit an appointment from the main form you will need to have the appointment highlighted (yellow color in screen shot below) and from there you can click update appointments. A screen will open with that appointment's details and within the fields you can then update the information.

The screenshot shows the 'MainForm' window with a title bar containing a standard Windows icon and window controls. The interface is divided into several sections:

- View Appointment By:** A text input field followed by a 'Search' button.
- Customers:** A table with columns: customerName, address, city, postalCode, and phone. It lists three customers: John Doe, Alfred E Newman, and Ina Prufung. The first row is highlighted in yellow.
- Buttons:** 'Add', 'Delete', and 'Update' buttons are located below the Customers table.
- Calendar:** A calendar for May 2022. The date 22 is selected and highlighted in blue. Below the calendar, it says 'Today: 5/22/2022'.
- Reports:** Three buttons: 'Appointments this Month', 'User Schedule', and 'Customer Appointments'.
- Appointments:** A table with columns: customerName, appointmentId, type, start, and end. It lists three appointments: John Doe (Presentation), Alfred E Newman (Contract), and Rebekah Test (Scrum). The second row is highlighted in yellow.
- Buttons:** 'Add', 'Delete', 'Update', and 'Exit' buttons are located below the Appointments table.

The screenshot shows the 'AppointmentDetails' window with a title bar containing a standard Windows icon and window controls. The window contains the following fields and buttons:

- Customer Name:** A dropdown menu with 'Alfred E Newman' selected.
- Type:** A dropdown menu with 'Contract' selected.
- Start Time:** A text input field with '2021/02/28 17:00:00' and a calendar icon.
- End Time:** A text input field with '2021/12/31 17:00:00' and a calendar icon.
- Buttons:** 'Cancel' and 'Save' buttons are located at the bottom.

## Scheduling Software Program

If the user selects one of the report buttons from the reports section on the main screen, they will be brought to the reports screen related to the button they selected. The user has three options. If they click the first button appointments this month, then the appointments type count by month form will open. From this they have a dropdown where they can pick the month that they would like to see appointments scheduled in and then click generate report. If no appointments are scheduled, they will get a pop up that says “no appointments scheduled this month”. If appointments are scheduled the report will show a list of the appointments scheduled for the month and count the appointments in a tally at the bottom of the form. It will also show the appointment ID. You can generate this report or return to the main screen. All the data is pulled in from the programs SQL database.

**Appointments Type Count By Month**

7	10	Scrum	5/22/2022 3:00 ...	5/22/2022 7:00 ...

Exit Screen

If the appointments per customer report is clicked, then a user can pick from the list of registered customers from a drop-down menu. From that they can generate a report that will show all the appointments that a particular customer has scheduled. All of this data is pulled in from the programs SQL database.

## Scheduling Software Program

**Appointments By Customer Report**

## Scheduling Software Program

### Unit Test Plan

#### Introduction

#### Purpose

Most of the testing that was completed for the scheduling software program was completed manually through the user interface of the program. I checked each feature extensively to ensure that the testing done on this scheduling program was completed through the user interface to ensure it operated correctly. I checked for data validation, error handling, and the functionality of each screen and component of the scheduling program. Screens were tested individually as a unit test before being added into the software scheduling program. Once every portion of the program was created and each unit was tested and added to the scheduling program, a final test was done to make sure all the forms, components of the program, user interface displayed correctly and the functionality of the code working with the data base was observed and worked together without any observable issues. The below gives all the details of each test that was completed for each unit. Any errors that I found were noted and given to my development team to have them corrected. Once all corrections were made the program was thoroughly tested again to ensure functionality was working and the program operated without issues. No errors were found during the final full test.

## Overview

Testing was completed by the dev team for each of its coding units, each set of the units were then added to the core program, and a final test was completed to ensure accuracy. Each individual section of the scheduling software program was tested in view controller pairs because each was considered one unit.

## Scheduling Software Program

Errors were documented within the main bug report. After errors were reported and documented they were then assigned to dev team members from the development team to resolve each of the issues. All tests were done within the program's user interface.

### Test Plan

#### Items

- Visual Studio 2022
- .Net Framework 4.8
- Access to test account to access the Application

#### Features/Functions

The functions that were tested with all the methods from all controllers. Tests were complete using the application user Interface. A complete use of the user interface was done to thoroughly test the methods. Data integrity was examined from the tests and validation of the data was done from the controllers. Any handling of errors and messages come from the controller interface from the application was included as part of the test plan.

### Deliverables

All of the tests that were completed in the tables above reflect the pass and fail mark for each test that was completed. Information is also given on which type of test was completed, they data that was used, and what the results we expected to get, and the actual observed results of each test. The data was then added to the document for the client to reference.

### Tasks

1. Do the test case.
2. Log test failures and assign to the special members of the development team for remediation.
3. Complete test cases.
4. Repeat steps 1-3 until all test cases are passed.

## Scheduling Software Program

### Needs

To complete the test there will be a need for a Windows 11 operating system environment. The machine will also require visual studio 2022 and .Net framework 4.8 installed. The machine will need access to a network connection to reach the MySQL database.

### Pass and Fail Criteria

The tables above reflecting the test plan do reflect a record for the pass and fail criteria within the actual results and expected results column. A pass will be recorded if both columns match. A failure or fail will reflect that the actual and expected results did not match. Discrepancies will be reported in the bug report log and then assigned to the development team members inside the development team to resolve.

### Source Code

The scheduling software program source code has been attached into the submission portal on WGU student website.

## Scheduling Software Program

### User Guide

#### Introduction

This is the user guide for all users of the Scheduling Software Application. Scheduling Software Program is a lightweight C# application designed for minimal backend setup and minimum install steps to get the program running. Follow the instruction below for how to setup and use the Scheduling Software Program.

#### Installation and Using the Application

For the program to run correctly and to ensure it installs we need to ensure that the client machine meets minimum requirements. The client machine needs to be running any version of Windows 10 or 11 OS. The .net runtime may need to be installed but most machines will have this installed previously when they installed their windows operating system. The administration team that handles the user access for the scheduling software program will need to ensure that the additional users for the program will also have access to a MySQL Workbench. To run the program please install the exe file from the debug folder of the visual studio zip file that has been sent to you.

1. The application will be sent in a .zip format. Right click the zip file and click on extract all.
2. The extract dialog will come up. Pick the location you want to extract the file.
3. Open the folder Scheduling Software Program that you extracted and double click the application named Scheduling Software Program.

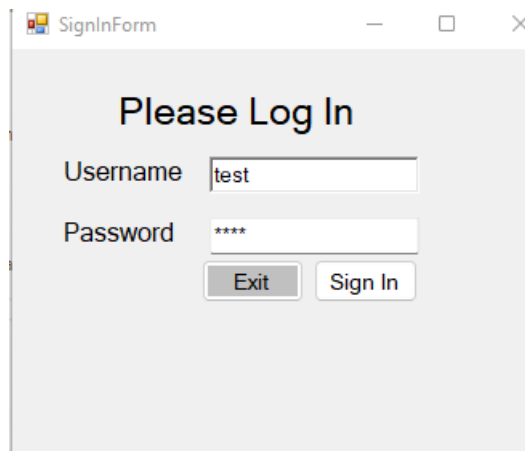

#### Logging In

1. You will need to fill in the text field with the username and password.
  - a. **For the test the username will be 'test' and the password will be 'test'. You will enter these values without the quotation marks.**

## Scheduling Software Program

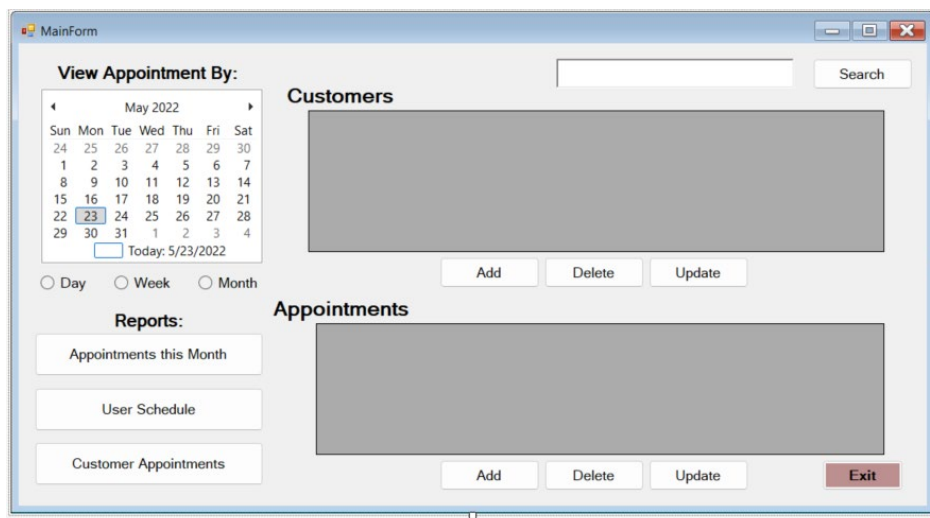

2. Click login button this will navigate you to the Main screen.

A screenshot of a Windows application window titled "SignInForm". The window has a light gray background and a title bar with standard Windows window controls. The main content area displays the text "Please Log In" in a large, bold, black font. Below this, there are two input fields: "Username" with the text "test" entered, and "Password" with four asterisks "\*\*\*\*" entered. At the bottom of the form, there are two buttons: "Exit" and "Sign In".

## Navigation-Main Menu

1. To exit the scheduling software program, you can press exit button from the right bottom of the page to exit the application.

A screenshot of a Windows application window titled "MainForm". The window has a light blue title bar and a light gray background. The main content area is divided into several sections. On the left, there is a "View Appointment By:" section with a calendar for May 2022. The calendar shows dates from 24 to 31, with the 23rd highlighted. Below the calendar are three radio buttons labeled "Day", "Week", and "Month". To the right of the calendar is a "Customers" section with a large gray rectangular area for displaying customer records. Below this area are three buttons: "Add", "Delete", and "Update". Below the "Customers" section is an "Appointments" section with a large gray rectangular area for displaying appointment records. Below this area are three buttons: "Add", "Delete", and "Update". At the bottom right of the window is a red "Exit" button. On the left side, there is a "Reports:" section with three buttons: "Appointments this Month", "User Schedule", and "Customer Appointments".

## Customers records screen

1. You can view all customer from the main screen and from this screen you can add, delete or update customer records

2. Click the Add button to add a customer record.
3. Click the save button when all fields are completed. The customer ID field will be generated by the system and is unable to be updated manually.
4. Click the cancel button if you do not want to make a new customer record.
5. When you have a customer, record selected by click on it click the update button to update the customer data.
6. To delete a customer when you have a record selected click the delete button. It will bring up a confirmation dialog. Hit yes to delete the customer and hit no if you decide you do not want to delete a customer or perhaps mistakenly clicked delete.
7. To search the customer records please type in the first or the last name of the customer and click search. The results will show all customers with that name.

### Appointments Screen

1. Appointments can also be viewed from the main screen

## Scheduling Software Program

The screenshot shows a window titled "MainForm" with a standard Windows-style title bar (minimize, maximize, close buttons). The interface is divided into several sections:

- View Appointment By:** A calendar for May 2022 is displayed. The date 23 is selected. Below the calendar, there are radio buttons for "Day", "Week", and "Month", with "Day" selected. A label "Today: 5/23/2022" is also present.
- Customers:** A large rectangular area for displaying customer records. Below it are three buttons: "Add", "Delete", and "Update".
- Reports:** A section on the left containing three buttons: "Appointments this Month", "User Schedule", and "Customer Appointments".
- Appointments:** A large rectangular area for displaying appointment records. Below it are three buttons: "Add", "Delete", and "Update", and a red "Exit" button.

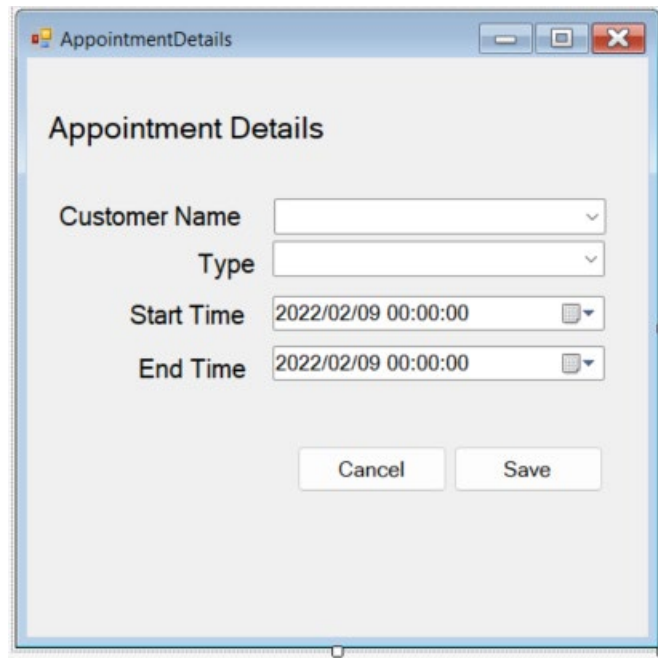

At the top right, there is a search bar with a "Search" button.

2. The appointments data and add appointments screen has similar options to the customer records page. The Add and update button function similarly to customer records page but opens the add/update appointment screen. Look further down in the user guide for information on that screen.
  - a. Don't forget to update an appointment you must have the appointment selected and that will be reflected with yellow highlight to the row.

### Update Appointment screen

1. Click the update button to update an appointment screen.
2. Enter the customer's name, pick the type of appointment from the drop down, enter the start, and end date and time and ensure you are picking a time within the business hour of 8am to 5pm. Click the save button to save the new appointment.

## Scheduling Software Program

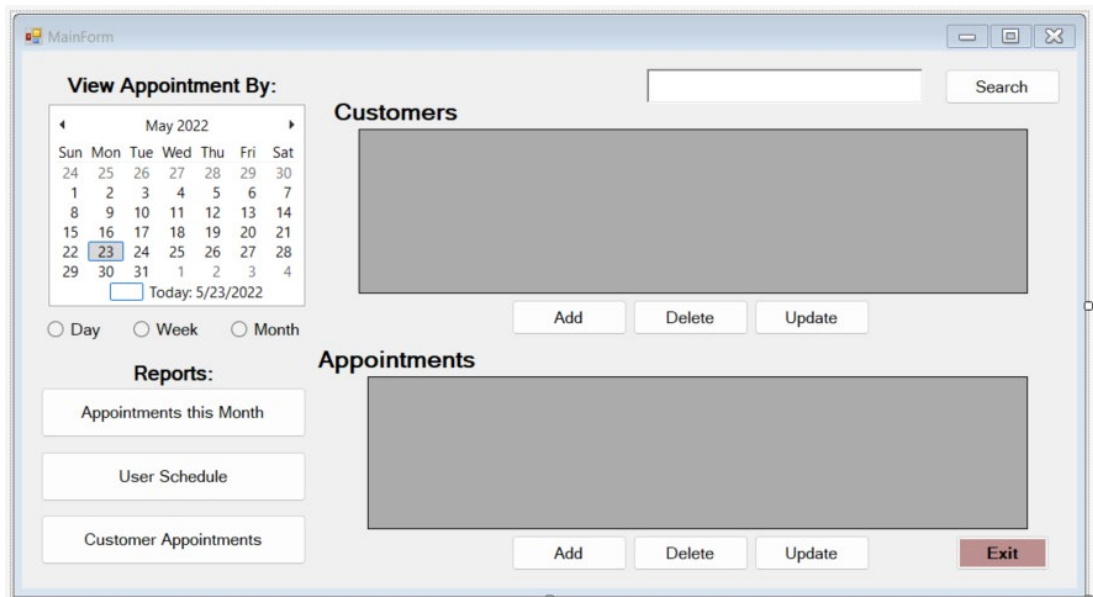

The AppointmentDetails dialog box is a standard Windows-style window with a title bar containing the text "AppointmentDetails" and standard minimize, maximize, and close buttons. The main content area is titled "Appointment Details" and contains four labeled input fields: "Customer Name", "Type", "Start Time", and "End Time". Each field has a dropdown arrow on its right side. The "Start Time" and "End Time" fields are pre-filled with the date and time "2022/02/09 00:00:00". At the bottom of the dialog, there are two buttons: "Cancel" and "Save".

3. The update appointment dialog has similar functionality but auto populates with the appointment's current information.

## Reports Screen

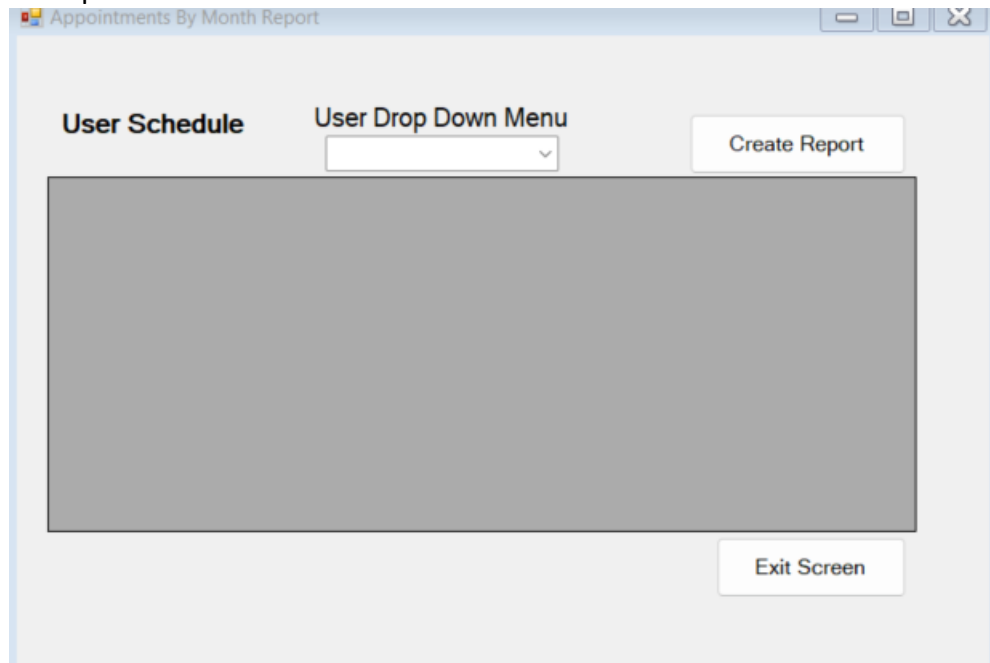

1. The three reports forms available can be accessed from the main screen.
  - a. Appointments this month report
  - b. User schedule report
  - c. Customer appointments report

The MainForm window is a complex interface for viewing and managing appointments. It features a title bar with the text "MainForm" and standard window controls. The main content area is divided into several sections. On the left, there is a "View Appointment By:" section with a calendar for May 2022. The calendar shows dates from 24 to 31, with the 23rd highlighted. Below the calendar are radio buttons for "Day", "Week", and "Month", with "Day" selected. Below these are three buttons: "Appointments this Month", "User Schedule", and "Customer Appointments". To the right of the calendar is a "Customers" section with a large empty box and buttons for "Add", "Delete", and "Update". Below the "Customers" section is an "Appointments" section with a large empty box and buttons for "Add", "Delete", and "Update". At the bottom right of the "Appointments" section is a red "Exit" button. A search bar with a "Search" button is located at the top right of the main content area.

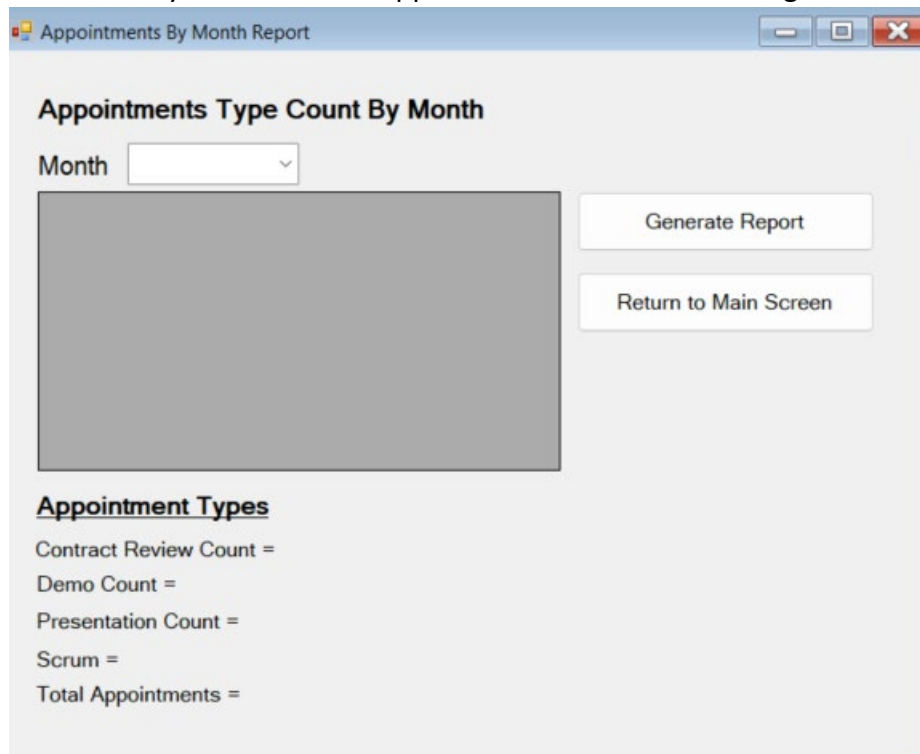

## Scheduling Software Program

2. To generate a report, click on the button of the report you want to be generated. The report will have a title at the top, follow by the options available along with a create report button multiple rows and columns of information inside the report box.
3. User Schedule Report

The screenshot shows a window titled "Appointments By Month Report". Inside, there is a section labeled "User Schedule" with a "User Drop Down Menu" containing a downward arrow. To the right of this is a "Create Report" button. Below these elements is a large, empty gray rectangular box intended for the report data. At the bottom right of the window is an "Exit Screen" button.

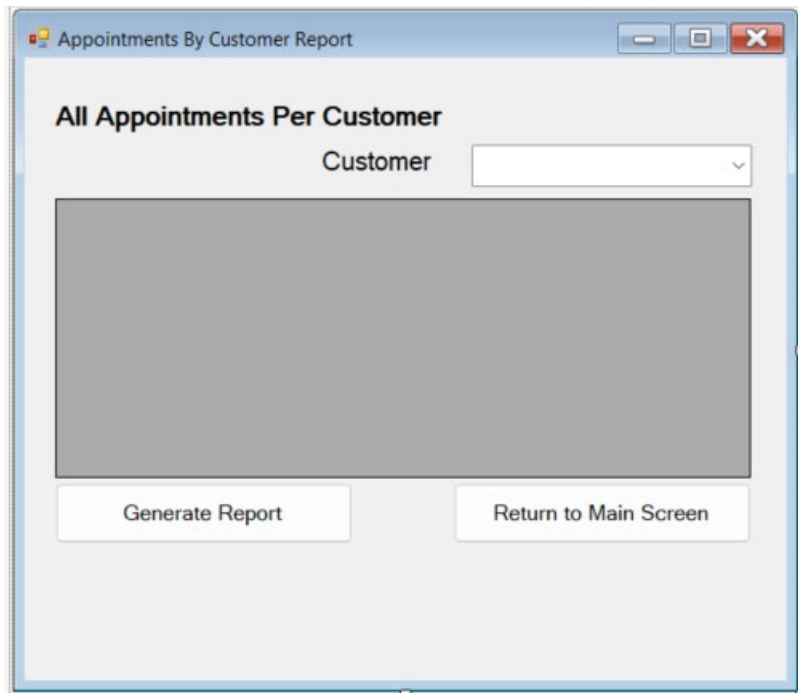

4. Appointments Type Count by Month report.
  - a. Pick the moth that you want to see appointments counted for and generate report

The screenshot shows a window titled "Appointments By Month Report" displaying the "Appointments Type Count By Month" report. It features a "Month" dropdown menu. To the right of the report area are two buttons: "Generate Report" and "Return to Main Screen". Below the report area, under the heading "Appointment Types", there are several lines of text with equals signs, indicating where counts will be displayed: "Contract Review Count =", "Demo Count =", "Presentation Count =", "Scrum =", and "Total Appointments =".

5. Appointments by Customer report.
  - a. Pick the customer you want to see a list of appointments they are scheduled for from the drop down menu and click generate report.

## Scheduling Software Program

The screenshot shows a window titled "Appointments By Customer Report". Inside the window, the text "All Appointments Per Customer" is displayed. Below this text is a label "Customer" followed by a dropdown menu. A large, empty gray rectangular area is positioned below the dropdown menu, intended for the report data. At the bottom of the window, there are two buttons: "Generate Report" and "Return to Main Screen".
